

cs.wikipedia

reliability D

Not measurable: only 1.2 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable. Treat this edition as unmeasured, not as flat - the point estimate below is reported for context only and must not be quoted as a growth rate.
· only 1.2 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable
· only 114 usable days: too short for any trend claim

uk.wikipedia

reliability B

Interest is declining: -45%/yr in share of the wiki's pageviews (95% CI -48% to -41%). Aligned year-over-year: -46%. Baseline 6 views/day (3.3 per million pageviews). Reliability B. Against its own edition: absolute views -57%/yr while all of uk.wikipedia moved -23%/yr, so the topic is losing ground within the edition, beyond the edition's own trend (share -45%/yr).
· low volume (13 views/day): percentage changes are unstable at this scale
· the window average clears the volume floor but the last 90 days average only 6 views/day: the trend is measurable historically, the current level is not

de.wikipedia

reliability B

Interest is essentially flat (-3%/yr in share of the wiki's pageviews, confidence interval spans zero). Aligned year-over-year: +1%. Baseline 17 views/day (0.8 per million pageviews). Reliability B. Against its own edition: absolute views -8%/yr while all of de.wikipedia moved -7%/yr, so the topic moves roughly with the edition (share -3%/yr).
· low volume (17 views/day): percentage changes are unstable at this scale
· the 95% confidence interval spans zero (-8% to 2% per year): the direction itself is uncertain

es.wikipedia

reliability D

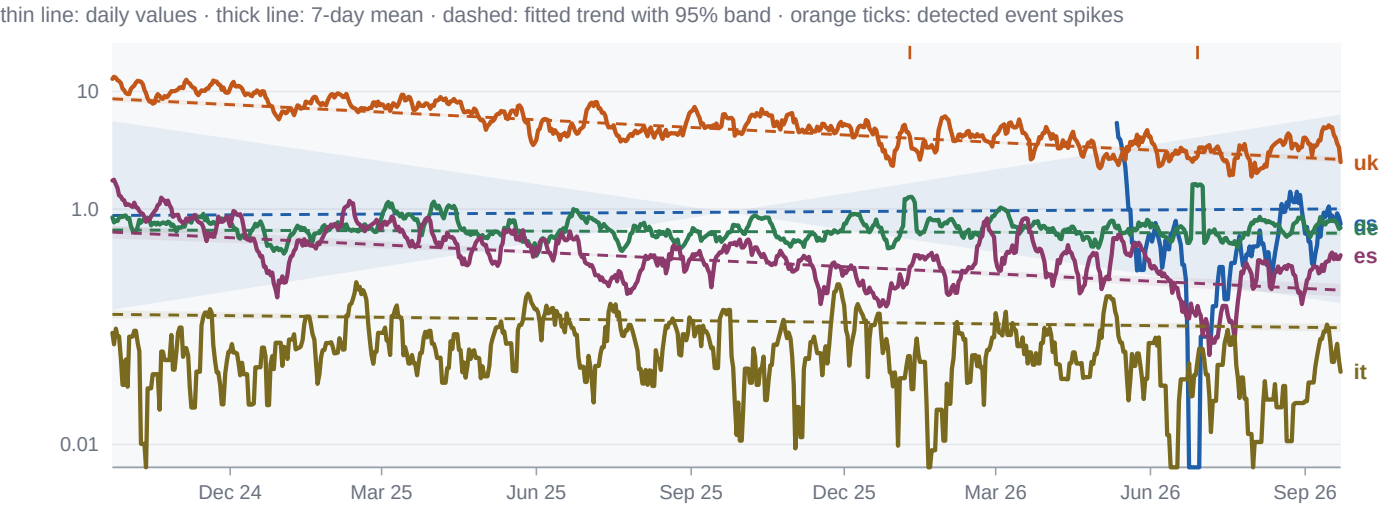

Not measurable: only 9.7 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable. Treat this edition as unmeasured, not as flat - the point estimate below is reported for context only and must not be quoted as a growth rate.
· only 9.7 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable
· low volume (10 views/day): percentage changes are unstable at this scale

it.wikipedia

reliability D

Not measurable: only 0.9 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable. Treat this edition as unmeasured, not as flat - the point estimate below is reported for context only and must not be quoted as a growth rate.
· only 0.9 views/day on average (floor is 10): day-to-day counts at this level are dominated by noise, and a % change is not measurable
· low volume (1 views/day): percentage changes are unstable at this scale

Share of the edition's pageviews (per million)

Growth in attention share, % per year (spike-free estimate where growth is event-driven)
